Full career record and field stories

CAPABILITIES

- Root-cause diagnosis
- AI workflow implementation
- Multi-agent orchestration
- Linux infrastructure
- Process automation
- Security & recovery controls
- Agent training

ENVIRONMENT

- On premises
Proxmox hosts, Linux VMs, Docker, systemd services
- Edge
Cloudflare Pages, Workers, R2, D1, secure tunnels
- AI layer
Local and frontier models, task routing, review gates
- Control
Git audit trail, human approval before any merge

LICENSE & STUDY

Texas Life, Health & Annuity
Network technology coursework, High Tech Institute, Phoenix, 1999–2000

HOW THE WORK RUNS

1. Diagnose the real failure
2. Build the fix, checks included
3. Hand the owner the controls

Turns operational problems into working systems, and stays accountable for what happens after deployment.

26 years across network field engineering, electrical construction, and insurance operations. Now builds and runs the AI workflows and infrastructure behind a live business: understands the need, diagnoses the failure, builds the fix, and gives the owner the controls to run it.

AI & AUTOMATION

SecureProspective · Founder · 2025–Present · built alongside roles below

- AI agent operations. Routes each task to the right local or frontier model, separates build from review, and requires human approval before any merge. Preserves intermediate findings so interrupted runs can resume.
- SP+ secure workstation. Designed and released a locked-down Linux workstation for financial advisors: signed updates, 150+ automated security checks, one-step rollback.
- Command Center. The live operating dashboard for the business. Plain-text records as the source of truth; guarded edits never silently overwrite work.
- Automated recurring operations. Document archiving, hash-verified backups with tested restores, campaign cadences with a kill switch, health monitoring across servers and cloud.
- Agent infrastructure. Self-hosted Nextcloud gives insurance agents private, company-branded file storage and sharing, with social publishing on the same self-hosted stack, published securely through Cloudflare.
- Engineering standard. Authored the rulebook AI coding agents follow: automated security scans and multi-agent review before a human signs off.
- Web. Built secureprospective.com with secure member login; migrated client sites to Cloudflare.

INSURANCE OPERATIONS

Operations Manager, Gold Shield Wealth	Jun–Aug 2026
Financial Services Consultant, State Farm	Apr–Jun 2026
Agent Development Specialist, Retirement Realized Financial	2024–2026
Marketer, DFS Marketing	2020–2024
Lead Quality Manager, American Income Life	2018–2020
Case design, analytics, and sales coaching; trained new agents from preparation through policy issue.	
2018–2026	

CONSTRUCTION & FIELD

Lead Installer, Miele USA	2011–2018
Electrician, commercial, residential & military-base projects	2003–2011
Promoted to foreman mid-project at Centech; delivered a low-voltage notification system while specs changed daily.	
2003–2018	

TECHNOLOGY

Field Technician, Insight · 400+ PC migrations	2003–2004
Network Field Engineer, Pro Net · USDA WAN, 83 sites	2002
HP Field Engineer, Trend-Setters · Bank of America	2002
HP Pavilion Support, MCI WorldCom	1999–2001
Resolved a registry fault blocking Tivoli deployment at the Baltimore office; completed the affected rollout by 4 AM.	
1999–2004
